My Personal Home Page Design

Naiyi (Tiffany) Zhang

I'm planning to have six pages in total: main page, about page, skills page, courses page, projects page, and hobbies page. The main page will be shown as the visitor opens my webpage. The main page displays my name, a photo, and links to all the other pages. On the bottom center of the other five pages, there will be a link taking visitors back to the main page.

1. About Page

Gives my basic information and contacts. Adds a welcome message along with a short introduction of myself (or a description of my webpage).

2. Skills Page

The skills page will cover both my technical skills and personal skills so I'm planning to use the grid system from Bootstrap. The page will be divided evenly and vertically into two sections. The left section contains a list of my technical skills (programming languages for instance) and the right section contains a list of my personal skills (soft skills).

3. Courses Page

On my courses page I plan to focus on CS related and Math courses I've taken (considering using the Bootstrap grid system also).
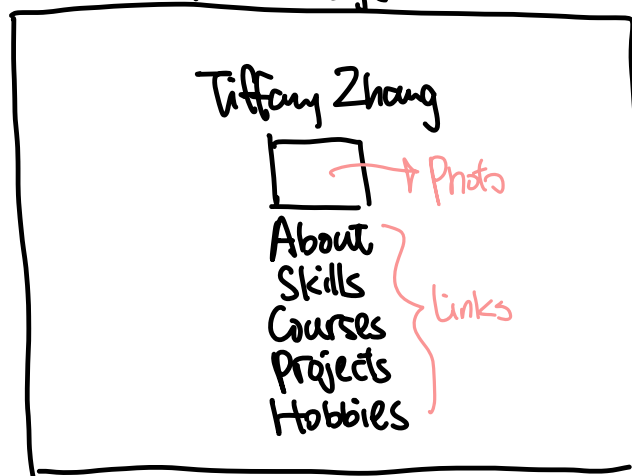

4. Projects Page

This page contains some of the projects I've done in the past (and maybe project ideas that I will do in the future). Each project will have a title, a picture, and a description so it will be a long page. This page should enable scrolling.
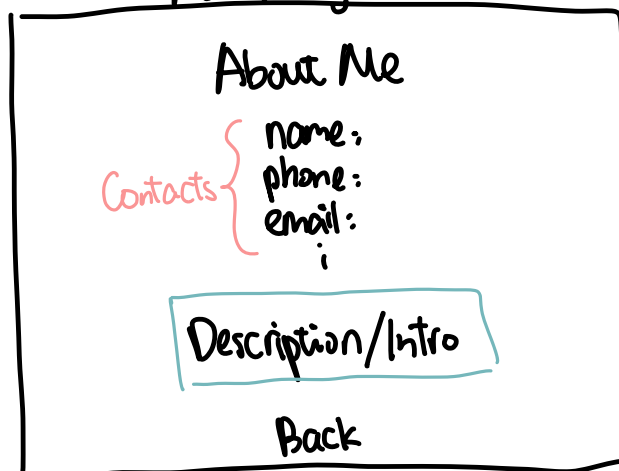

5. Hobbies Page

Simplest page, just a list of my hobbies and maybe some photos.
